Defeated Carbon High in Monday Night's Game.

In the final game to decide the championship of the Nels Division of the state basketball tournament the Springville high school team won over the Carbon high team Monday night. The game was a hard one from the start and the Price boys went after the visitors from the beginning, but were simply overwhelmed in height, weight and experience. This was given the Springville aggregation admission in the state tournament which is meeting at Logan this week.

Early in the game Harold Leonard met with an accident to his knee which necessitated the substituting of Freeman Tucker in his place. Royland Franklin was the shining light for the Carbon high, going through the Springville division in a number of occasions and checking up five goals to his credit.

Because of the speed with which the game was played considerable fueling resulted. The visitors were charged with eighteen fouls, only nine of which were converted into counts by the Carbon team.

Salt Lake City, according to a communication received from the war department, stands third in the enrollment of men for the United States army, with a record of 191,6 per cent. Fort Wayne, Ind., comes first with 278,9 per cent and San Francisco second with 276,8 per cent.

## GROWING THE ALTON IMPROVED RED RASPBERRY.

Doesn't winter kill hardest of all, the most productive of all raspberry known? It commences to ripen its enormous crop the first of July and continues to bear heavily during July, August and September. Enormous size, delicious in flavor, beautiful in color. It's a prime summer, the market making king of all. It's far ahead of the old common sorts as far as the number is ahead of the old red raspberries. One acre is worth more than thirty acres in corn plants. Sold with a three years guarantee, money back if not as represented. If desired I will let you have them on one, two or three years time. Let me have you get started in this pleasant and profitable business. The berry is very highly recommended by Prof. Robert H. Stewart, county agricultural agent, also by many others. Only a limited number of plants left. Write me for free pamphlet, telling all about this wonderful berry. A postal will do. Be quick before they are all sold.

H. A. PINEGAR, Wellington, Utah.

## Our New Hats Here

We are showing this week an entire new line of Spring Hats. They come in all shades and shapes, trimmed and untrimmed, and should be seen to be admired.

BESSIE KENNEDY, MILLINERY, Inc.

## CARBON COUNTY IS GOING IN FOR CLUBS

IS LITTLE BEHIND EMERY ALONG THESE LINES.

MUCH INTEREST SHOWN IN THE TWO SECTIONS AS TO SHOW AND OTHER BETTER METHODS IN THE MATTER OF FEEDING.—WAR OF EXTERMINATION ON PRAIRIE DOGS—STOCK AND GRAIN SALES.

To date there have been eleven local farmers' organizations perfected in the two counties," says Prof. Wallace Sullivan, county agricultural agent. "Practically every club has taken on an active campaign against the prairie dog. More and better live stock for Carbon and Emery counties is the big project to be gone into by these organizations. This means live stock on practically every farm, more silos, more feeding, more feed crops and more dairying. Various plans will be carried out to promote this big project. Then there will be some projects on standardization of the oat, wheat and potato crop and on disease control of each. Keeping a record of the farm business is to be encouraged by these farmers' organizations. Already about a hundred farmers have each taken one of the new farm account books and have begun to keep a record of their business. Emery county has organized its county farm bureau, thereby federating all of these clubs into one big countywide organization with H. A. Nelson of Ferron as president.

### CARBON IS TO ORGANIZE.

"Carbon county has enough local organizations so that their directors will meet in a few days and organize. A great deal of interest is being shown by the farmers in the subject of silos. A number have indicated their intention of putting up silos this fall. The three silos at Ferron and one at Emery are proving a great success, and the owners are well pleased with the feeding results obtained. Ben H. Elbridge, United States agent in dairying, will spend the week beginning March 19th in discussing this question with the farmers.

"Now is the best time to poison the prairie dog. Several of the farmers clubs are taking this up as a project. Why not everybody get busy now and make this a countywide movement? A method for preparing the poison was published in last week's Sun.

### BIG FEEDING COUNTIES.

"Thousands of head of feeders, hogs and sheep are shipped each year from these counties to Eastern feeders. Now that a new packing plant and stockyards are going up in Salt Lake City it means that we will have a good market close at home for finished stuff. Two and a half million dollars worth of pork was shipped into this state last year from the East. The suit here demands more hams in the form of hamyard manufacture in order to make it more productive. Good feed crops can be grown here. All these things indicate that Carbon and Emery counties should be shipping out fat stuff and not shipping in so much prepared meat.

The secretary of each local club has a list of farmers that have seed or stock for sale. If in need of seed see your local secretary first."

### CITY COUNCIL MEETS

Short Session Held Tuesday Night—Business Transacted.

The city council met in regular session Tuesday evening, all members present, and the following business was disposed of:

The council was informed by a local insurance agency that one fire and accident policy written on the new city fire truck was canceled by the company, for the reason that they did not desire to carry this sort of risk.

The policy had been returned to the local agency and it is not likely that anything further will be done in regard to the matter. Since the apparatus can only be insured against damage by fire while house in some inclosures, this risk seems all right. But it would be throwing money away to keep the vehicle insured.

George A. Nixon and wife have decided to the city thirty feet around all sides of Lot 4, Block 16, in Price Local survey, for streets. This property lies between Fifth and Sixth streets, adjoining the canal, and the ground deed above now makes the streets around the block of the regulation width.

Desmond Morrison has been temporarily employed to run the sprinkling wagon as soon as it is determined when sprinkling shall commence. It has been ordered that the sprinkler be repaired and painted, ready for use.

When H. B. Rottnet was ordered by the city to set his warehouse back fifteen feet from the street line, at the intersection of Ninth street and the railroad right-of-way, it entailed some extra expense in excavation, for which the city agreed to reimburse him. In accordance with this agreement, Rottnet presented a claim for twenty dollars, which was allowed.

The Catholic people of Price were granted the use of City Hall every Sunday morning for Sunday school purposes, the only charge for such use being actual cost of heating.

A. J. Grimes was authorized to spread poisoned grain at the cemetery and city park for the extermination of prairie dogs. These little pests are quite numerous, and this is the proper time to get them. It is said by experts.

The usual claims were allowed and paid.

MERCHANTS COUPON BOOKS IN ALL DENOMINATIONS. THE SUN.

## Mr. J. H. Manson Makes Proposition to the Taxpayers of Price.

"First—I hereby agree to pay off all of the electric light bonds now owing by the city of Price and amounting to twenty-five thousand dollars, the same to be paid eight thousand dollars July 1, 1929; eight thousand July 1, 1932; and eight thousand April 1, 1935.

"For the purpose of retiring these bonds on the above dates, which is the first optional period they can be paid, I agree to deposit in such bank or banks as may be designated by the city council, at the time of the signing of the proposed lease, the sum of \$135,000, one year from date of said lease to deposit the sum of \$130,000 and on April 1, 1929, to have on deposit to the credit of said city the sum of \$190,000.

"And, on the first of April, 1921, to have on deposit in such bank or banks as may be designated by the city the full sum of \$139,000, and on the first day of January, 1925, to have on deposit in such bank or banks as may be designated by said city the further sum of \$190,000.

"And, to further guarantee to the said city that the same shall be done as hereinabove agreed, I will furnish to the city a good and sufficient bond to be approved by the city in the sum of ten thousand dollars.

"Second—to furnish free of all cost to the city of Price at all times during the term of said lease all current necessary to light the streets of Price in as good a manner as they are now lighted, to furnish current or power free of cost to the city for the purpose of pumping water necessary for the maintenance of its municipal water plant; and to furnish all current necessary to properly light all buildings owned or used for municipal purposes, to make all necessary extensions for the purpose of lighting said streets and to furnish all lamps at my own expense used in connection with said lighting system at all times during the term of said lease.

"Third—to give to the consumers of said city twenty-four hours continuous service, and be prepared at all times to serve the public with the right and proper kind of service. To make all necessary police extensions at all times during the life of this lease that may become necessary to serve the public at my own expense.

"Fourth—I hereby agree that the present schedule of prices charged the public at this time shall not be raised during the life of said lease, but reserve the right to lower the rates at any time should the operation of the plant justify it.

"Fifth—to keep said plant, all poles and everything in connection with said electric light and power plant in a good state of repair at all times during the said lease at my own expense, and at the expiration of said lease to turn over the plant, all poles and extensions within the corporate limits of said Price City in as

good or better physical condition as they are now in, all new extensions so made by me during the lease to become the property of said city, free of any and all indebtedness without cost to said city.

"That as a part of the consideration on behalf of the city of Price, said city shall grant to said J. H. Manson a franchise for the purpose of laying steam pipes for furnishing heat to the business section of said city for a period of twenty-five years on those streets:

"On Ninth street between the Denver and Rio Grande tracks to 'T' street.

"On 'T' street from Sixth to Tenth street.

"On Seventh street between 'H' and 'J' streets.

"On Eighth street from a point two hundred feet south of the Denver and Rio Grande tracks to 'I' street.

"That at the expiration of said lease the city of Price will cause to be paid to J. H. Manson the actual physical valuation of all steam mains (or steam lines), the valuation to be arrived at by a committee to be appointed by the city and one by the lessee—and the two to appoint a third, whose findings shall be final.

"Or, I will retain the steam pipe system with the understanding of being granted a new franchise for heating at the end of twenty-five years.

"And that all said steam pipes and connections therewith are to become the property of said city free of all indebtedness of every kind and nature, and that all contracts between the said J. H. Manson at the date of the expiration of said lease shall be turned over to the said city.

J. H. MANSON.

Estimated savings to the city of Price should the people determine to lease their light and power plant un-

der the proposition submitted by J. H. Manson, now on file with City Recorder, Lauber and dated February 20, 1917, are given in a subjoined table.

In connection with the statement of estimated savings to the city and also income and disbursement figures presented as given above, Manson says: "If the city continues to operate the plant for a period of twenty-five years under present conditions it would still be owing the bonds and will have paid interest on bonds amounting to \$137,600, besides losing in operating expense and upkeep of plant. It is not better to lease the plant and receive it back in twenty-five years—guaranteed to be in as good or better condition than it is at the present time—free of indebtedness of every character, receive free current and power for lighting the streets, pumping its water and lighting its buildings?"

"Without further bonds the city is not able to make the extensions necessary to supply the people of Price with the current desired. Several extensions have been added for during the past three or four years, but none have been built. Under the proposed lease these extensions will be built, money will be invested to get more consumers, a heating plant will be established and maintained from waste steam from the plant under lease, thereby reducing the cost of heat to owners of business blocks within the business section of the city.

"With the present bonded indebtedness for electric lights removed it will give the city power to bond for twenty-five thousand dollars more for good and better water. The present bonding limit of the city, over and above present bonds, is about eighty-five thousand dollars. If the electric light bonds were paid this would increase our bonding limit to one hundred and ten thousand dollars."

## FIGURES ARE SUBMITTED

Bonded Indebtedness paid off	\$ 25,000.00
Ten years' interest on present debt	15,000.00
Twenty-five years' street lighting valued at \$2194.54	24,844.00
Twenty-five years' current for pumping water at present consumption, valued at \$1037.13	25,928.25
Twenty-five years' current for lighting public buildings, estimated	7,500.00
Twenty-five years' upkeep based on 5 per cent per annum on investment of \$10,000.00	50,000.00
Total	\$178,292.25
Less interest to be paid on bonds to date of optional payment	8,170.00
Balance	\$170,122.25

### STATEMENT OF INCOME AND DISBURSEMENT DURING PART TWENTY-ONE MONTHS.

Amount paid J. H. Manson at the rate of \$150.00 per month	15,750.00
Interest on bonds	2,625.00
Depreciation based on 5 per cent per annum	2,328.65
Total income from all sources averaging \$897.47 per month	18,684.67
Loss to city for twenty-one months	\$ 2,928.18

## THINK THE MATTER OVER

### STATE CHEMIST HARMES GIVES AN ANALYSIS ON FISH CREEK WATERS

On the 20th of January last, Herman Harms, state chemist, made a detailed sanitary analysis of the water of Fish Creek where that stream empties into the Price river near Coalon, for A. C. Ellis Jr., to determine the purity, safety and fitness of this water for culinary and domestic purposes for the city of Price and the other communities to the west that figure off using it. After going into detail at considerable length as to the composition of this water, State Chemist Harms concludes:

"This water contains a fair amount of solids, the characteristics of which are stated. These are such in character and quantity as are present in the average drinking water. The water closely resembles that from Big Cottonwood Canyon, one of the main supplies of Salt Lake City.

"Water containing a small amount of solids is always preferable to the one containing a high amount of saline matter. Some authorities have attempted to place the limit of safety of solids in a water at between forty and fifty grains per United States gallon. Yet, owing to the geological formation of the country, a community is at times compelled to use a water containing a hundred or more grains per gallon.

"Calcium and magnesium chloride, free acids, acid salts, potassium or metallic impurities, foreign gases, as well as other objectionable constituents, are entirely absent. Therefore, the residue does not clog, char or blacken, but softens a tribe. The proportion of chlorine, respectively, sodium chloride is exceptionally low and would be the means of keeping a ready check upon the purity of this water.

"Organically considered, the water is of first-class organic purity. Neither nitrates nor nitrites are present. Upon gentle ignition of the residue no foreign odor is emitted. Furthermore, the residue does not clog, char or blacken, but softens a tribe. The proportion of chlorine, respectively,

sodium chloride is exceptionally low and would be the means of keeping a ready check upon the purity of this water.

"The amounts of free and albuminoid ammonia as well as oxygen consumed are such as to place the water into the class of first-class purity.

"Equally favorable results were obtained in a careful bacteriological examination, showing that the water is absolutely free from coliform bacillus or other disease-producing organisms.

"All of the above tests amply confirm that no contamination of the water by sewage, seepage, drainage or other sources of pollution has taken

## Ask The Cook She Knows

The sure way to keep a good cook is to furnish her something to cook with. Nothing better pleases her than a perfect stove and utensils.

The perfection of utility and comfort in cooking is obtained if you install one of our famous Stewart steel ranges.

And be sure that a full supply of our elegant granite or aluminum ware goes with it. Come right in and see them. They're beautiful.

## J. G. Weeler Lumber Co.

## COLLETT'S LUNCH ROOM

When you want a short order meal we can serve you to suit your tastes. Everything modern and up to the minute. We cater to those who are in a hurry. Everything strictly sanitary and of highest quality.

Main St., East of Rio Theater.

## Coal Miners Wanted

Year round work guaranteed with all the cars the men can load. First-class boarding house on the ground. Good accommodations.

## Carbon Fuel Company

Rains, Utah.
